

AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior listings of claims presented in the application

Claim 1 (currently amended): A wrapping container for individually wrapping an interlabial pad, comprising:

a wrapping sheet~~container~~; and

a separation portion~~broken line~~ indicating perforations disposed on the wrapping sheet for completely separating or dividing the wrapping container into two separated~~separate~~ sections, wherein each separated~~separate~~ section after the separation turns up to be an operation member for wearing or removing~~is provided for inserting or removing~~ said interlabial pad.

Claim 2 (currently amended): The wrapping container for individually wrapping an interlabial pad of claim 1, wherein said wrapping container comprises respectively~~a~~ finger insertion portions ~~for inserting fingers respectively in a portion becoming respectively an separated for each separate section after the separation~~; and

~~in a state where said wrapping container is separated into respective separated sections at the separation portion, a fingers are~~ is inserted into ~~the~~each finger insertion portions of respective separated sections which turn up to be an operation member for wearing or removing~~to insert and remove~~ said interlabial pad.

Claim 3 (withdrawn-currently amended): The wrapping container for individually wrapping an interlabial pad of claim 2, wherein: said finger insertion portion comprises:

~~at least one~~ mini sheet piece for a wrapping container attached to the wrapping container so that an opening for inserting a finger is formed,

~~two or more bonding portions in the wrapping container, and one or more non-bonding portions in the wrapping container;~~

wherein one~~said~~ mini sheet piece for wrapping container is attached in a state striding across said broken line~~separation portion in~~ on said wrapping container, or said mini sheet pieces

one mini-sheet piece and one other mini-sheet piece are attached respectively on the separate sections to both sides of said separation portion.

Claim 4 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 3, wherein said mini sheet piece for wrapping container is attached to an outer face side and/or an inner face side of said wrapping container.

Claim 5 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 2, wherein:

 said wrapping container for individually wrapping an interlabial pad is a wrapping container for individually wrapping an interlabial pad which wraps an interlabial pad having a finger insertion opening; and

 in addition to said separation section, the wrapping container for individually wrapping an interlabial pad is provided with a pre-unwrapped opening that allows the finger insertion opening of the interlabial pad contained therein to be exposed naturally at the beginning of unwrapping the wrapping container for individually wrapping an interlabial pad.

Claim 6 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 5, further comprises:

 a series of wrapping sheet wound in a way to form an overlapping part where a part thereof is overlapped, or

 a series of wrapping sheet superimposed in a way to form an overlapping part where both ends thereof are superimposed each other,

 wherein said pre-unwrapped opening is formed of said overlapping part.

Claim 7 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 5, wherein:

 said pre-unwrapped opening comprises:

 a broken line whose both ends are connected to said separation portion, and

 a tearing portion formed by tearing off a part of said wrapping container for

individually wrapping an interlabial pad along the broken line; wherein the unwrapping is executed by tearing off a part of said wrapping container for individually wrapping an interlabial pad along the broken line.

Claim 8 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 5, wherein said separation portion and said pre-unwrapped opening facing each other.

Claim 9 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 1, wherein:

 said wrapping container for individually wrapping an interlabial pad is a wrapping container for individually wrapping an interlabial pad which wraps an interlabial pad having a finger insertion opening;

 the wrapping container comprises

 a pre-unwrapped opening that allows the finger insertion opening of the interlabial pad contained therein to be exposed naturally at the beginning of unwrapping of the wrapping container, and

 a separation edge turning to be said separation portion;

 said wrapping container has a bean sheath shape comprising:

 a pre-unwrapping edge along one edge thereof and, at the same time, said separation edge is provided along one of the edges continuous to this pre-unwrapping edge, and

 a finger cot where a finger can be inserted is formed right and left respective sides face becoming respectively an separated section after the separation of the wrapping container along said separation edge; and

 in a state where said wrapping container is separated into respective pieces, fingers are inserted in said finger cot section portions in respective pieces which turn up to be an operation member for wearing or removing said interlabial pad.

Claim 10 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 9, wherein:

 said pre-unwrapping edge comprises

a broken line whose both ends are connected said separation portion, and

a tearing portion formed by tearing off a part of said wrapping container for individually wrapping an interlabial pad along the broken line;

the unwrapping of said pre-unwrapping edge is executed by tearing off a part of said wrapping container for individually wrapping an interlabial pad along said broken line; and

the starting point of said broken line is disposed in such a place to be position near the finger insertion opening of the interlabial pad, when said interlabial pad is contained.

Claim 11 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 1, wherein:

said wrapping container comprises a longitudinal flat cylindrical shape having both ends closed; and

in a state where said wrapping container is separated into respective separated section at said separation portion, the wrapped interlabial pad is exposed and, at the same time, the separation portion of the separated respective piece becomes an opening where a finger can be inserted, and, by inserting the finger from the opening, turns up to be an operation member for wearing or removing said interlabial pad.

Claim 12 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 11, wherein said separation portion is set in such length that the starting point thereof starts from one end edge and that the terminal thereof does not reach the opposed other end edge.

Claim 13 (withdrawn): A wrapping container for individually wrapping an interlabial pad, comprising:

an inner wrapping container for directly wrapping an interlabial pad, and

an outer wrapping container for wrapping an inner wrapping body containing the interlabial pad in said inner wrapping container, wherein:

said inner wrapping container comprises a longitudinal flat cylindrical shape where both ends are closed;

said inner wrapping container comprises a separation portion for separating said wrapping container into two small sections; and

in a state where said wrapping container is separated into respective separated small sections at said separation portion, the separation portion of respective small sections becomes an opening where a finger can be inserted, and inserting the finger from the opening turns up to be an operation member for wearing or removing said interlabial pad.

Claim 14 (withdrawn): A wrapping container for individually wrapping an interlabial pad having a finger insertion opening, wherein:

said wrapping container is made of a wrapping sheet having a pocket portion having a size capable of holding an interlabial pad having a size and shape allowing to be kept by pinching between the labia, in a state where the interlabial pad is folded half longitudinally taking the longitudinal direction of interlabial pad as an axis.

Claim 15 (withdrawn): The wrapping container for individually wrapping an interlabial pad of claim 14, wherein said pocket portion comprises a place where a part of a series of wrapping sheet is bent.

Claim 16 (withdrawn): A wrapping container for individually wrapping an interlabial pad with a mini sheet piece, for forming a finger insertion opening, said wrapping container having a vertical direction of the interlabial pad, comprising:

a vertical direction indication means for indicating the vertical direction related to the pre-unwrapping portion for unwrapping said wrapping container.

Claim 17 (withdrawn): A wrapping container for individually wrapping an interlabial pad having different finger insertion point according to personal differences, wherein: a pre-unwrapping portion is provided for unwrapping said individual wrapping container,

said pre-unwrapping portion is disposed in plurality according to the finger insertion point based on the personal equation of said individually wrapped interlabial pad and, moreover, said wrapping container is provided with an unwrapping position guide means for guiding a kind of said finger insertion position.

Claim 18 (withdrawn): A wrapping container for individually wrapping an interlabial pad having a finger insertion opening, wherein:

the pre-unwrapping portion for unwrapping said wrapping container is unwrapped by tearing off a part of said wrapping container along a broken line introducing the position of said pre-unwrapping portion; and

the interlabial pad is contained so that said finger insertion opening is exposed first, in a state where said pre-unwrapping portion is unwrapped.

Claim 19 (currently amended): The wrapping container for individually wrapping an interlabial pad of claim 1, comprising a laminate material having a fiber sheet on anthe inner face side, and a film sheet on anthe outer face side.

Claim 20 (previously presented): The wrapping container for individually wrapping an interlabial pad of claim 1, comprising a biodegradable material and/or a water-soluble material and/or a water dispersible material.

Claim 21 (withdrawn): A wrapping body, comprising: an interlabial pad having a mini sheet piece for the interlabial pad forming a finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space following the opening, and a wrapping container for individually wrapping an interlabial pad, wherein:

said interlabial pad is contained as folded so that said finger insertion opening opens when the pre-unwrapping portion is opened in order to open said wrapping container.

Claim 22 (withdrawn): The wrapping body of claim 21, wherein said interlabial pad is contained, so that said mini sheet piece for said interlabial pad is folded toward the opposite side to the body side along the substantial central line in the longitudinal direction of said interlabial pad.

Claim 23 (withdrawn): A wrapping body, comprising:

an interlabial pad having a mini sheet piece for interlabial pad, the mini sheet piece having a finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space following the opening, and

a wrapping container for individually wrapping an interlabial pad, wherein:
said interlabial pad is contained in a direction orthogonal to said wrapping container for
individually wrapping an interlabial pad.

Claim 24 (withdrawn): A wrapping body, comprising:

an interlabial pad having a mini sheet piece for interlabial pad, the mini sheet piece having a
finger insertion opening where an opening of fingerbreadth is secured and a finger insertion space
following the opening, and

a wrapping container for individually wrapping an interlabial pad, wherein:

said interlabial pad is contained so that said finger insertion opening in said interlabial pad
to be contained is positioned near the pre-unwrapping portion for unwrapping said wrapping
container for individually wrapping an interlabial pad.

Claim 25 (withdrawn): A wrapping container for individual wrapping of sanitary napkin,
comprising a pocket portion for receiving interlabial pad in order to receive a used interlabial pad.

Claim 26 (new): A wrapping container for individually wrapping an interlabial pad,
comprising:

a wrapping sheet;

a cutting line with perforations provided on the wrapping container for cutting the wrapping
container; and

at least one mini-sheet piece disposed on the wrapping sheet, said mini-sheet piece having a
dimension that is smaller than the wrapping sheet and having an opening for inserting a finger.

Claim 27 (new): A wrapping container according to claim 1,
wherein a mini-sheet piece is attached across the broken line.

Claim 28 (new): A wrapping container according to claim 1,
wherein two mini-sheet pieces are disposed on the wrapping sheet, and the two mini-sheet
pieces are divided by the broken line.

Claim 29 (new): A wrapping container according to claim 1,
wherein a wrapping container has a pre-unwrapped portion for taking out an interlabial pad.
